Release Notes for J2735 Module Collection package

Date: 13 April 2023

File name: "V2X ASN.1 Module Collection 2023-04-13.zip"

Purpose:

Release in support of limited scope ballot of J2735, pending for end of April timeframe.

Changes:

- Modified SIZE constraints for *VehicleEventFlags* in module "J2735-Common-v7.asn". Previous release had broken backwards compatibility.

Known issues, limitations, restrictions: None

ASN.1 modules list:

- Includes all J2735 base modules, i.e., those whose filenames begin with "J2735-"
- Includes J2945/x modules for RoadWeatherMessage, ProbeDataConfig, ProbeDataReport
- Includes placeholder modules for all other (J2945) modules.

asn1studio project: "V2X ASN.1 Module Collection.a1sproj"

Additional notes:

- The item listed above in *Changes* identifies the primary update for this release package.
- Other differences between this release and the previous J2735 base release "V2X ASN.1 Module Collection 2022-08-11.zip" are identified below.
- Differences between the previous release and this release:
    - J2735-Common-v6.asn replaced with J2735-Common-v7.asn (see *Changes* above)
    - Changed the file name of "J2735-RoadWeatherMessage.asn" to "RoadWeatherMessage.asn". RWM is not specified in J2735 so should not have had the "J2735-" tag prepended to the file name.
    - Placeholder file RoadGeoAttributes-v1-ph.asn removed (should not have been included, as it was replaced by placeholder file RoadGeoAttributes-v2-ph.asn.)
